DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, drawn to a device with a starter/generator, classified in class 322, subclass 4.
- II. Claims 7-14, drawn to method of operating a device with a starter/generator, classified in class 290, subclass 38.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case invention I does not require "before the combustion engine is started" to have the flywheel decoupled at least from the combustion engine or to have the drag torques be separated or have the gearbox being shifted to neutral after the flywheel is brought into effective connection with the energy source.

Other devices for combustion engines design are not required to such specific method of operation. Moreover, having the flywheel disconnected and connected after certain periods of times is not required in invention I ; neither it is necessary to accelerate the gearbox input in order to change down a gear.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper and because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
